# DESCRIPTION

The AeroAudio HP AMP is a superb well designed studio quality headphone amplifier made for Jocks and producers that hides away and just does the job you need it for.

The +20 year field proven design ensures your ears are safe from annoying cracking audio on touching the volume knob. With a double output for both 3.5 and 6.3mm jack's makes the annoying 'where did I put it' adapters obsolete, just simply connecting all types of studio headphones. The rock solid miniature casing hides away under your desk with a special design so your knees are safe from painfully bumping it. A small bright shining LED let's you find the Amp instantly.

Connecting it has never been so easy. The audio link is based on the AES67 and Dante™ audio over IP standards. Just connect it to your AES67/Dante™ IP network and link it to the needed sources using the Ravenna™ AES controller or the Audinate™ Dante™ controller.
